Introduction	Model description	Results	Summary
0 ● 0000	00 00000000 00	00 000	

- Simulation of crop response to nitrogen fertilisation
- Influence of nutrient budget on the rate of leaf and tiller appearance (to a lesser extent than temperature and day length)
- Relations between carbon and (soil) nitrogen (nitrogen uptake, photosynthesis)
- Crop yield determined by nitrogen availability
- Optimisation of nitrogen fertilisation to increase crop yield in cereals and to decrease costs and environmental pollution

FSPM of winter barley (Hordeum vulgare L.) (L-studio)

Vegetative growth (Buck-Sorlin 2002¹)

¹L-system model of the vegetative growth of winter barley (*Hordeum vulgare* L.). In: Polani, D., Kim, J., and Martinetz, T., editors. Fifth German workshop on artificial life: *Abstracting and synthesizing the principles of living systems*, March 18-20, 2002, Lübeck, Germany. Akad. Verl.-Ges. Aka, Berlin, 53-64.

K. Smoleňová, G. Buck-Sorlin

Results 00 000 Summary

FSPM of winter barley (Hordeum vulgare L.) (GroIMP)

 Breeding, genetic control, hormonal regulation of internode elongation (Buck-Sorlin et al. 2005², 2007³)

²Barley morphology, genetics and hormonal regulation of internode elongation modelled by a relational growth grammar. *New Phytologist*, 166 (3): 859-867.

³A grammar-based model of barley including virtual breeding, genetic control and a hormonal metabolic network. In Vos, J., Marcelis, L.F.M., de Visser, P.H.B., Struik, P.C., and Evers, J.B., editors. *Functional-Structural Plant Modelling in Crop Production*, volume 22 of Wageningen UR Frontis Series, chapter 21, pages 243-252. Springer, 1 edition.

Model description

Results 00 000 Summary

Components of the C and N sub-model

- Partitioning of substrates between shoot and root (Johnson et al. 1985⁵, Thornley et al. 1989⁶)
 - Compartment-based model of crop response to light, temperature and nitrogen

Partitioning within the shoot (Marcelis 1996⁷, Yin et al. 2003⁸)
 Sink strength concept

⁵Dynamic model of the response of a vegetative grass crop to light, temperature and nitrogen. *Plant, Cell & Environment*, 8(7):485-499.

⁶A model of nitrogen flows in grassland. *Plant, Cell & Environment*, 12(9):863-886.

⁷ Sink strength as a determinant of dry matter partitioning in the whole plant. *Journal of Experimental Botany*, 47 (Special Issue), 1281-1291.

⁸ Crop Systems Dynamics. An ecophysiological simulation model of genotype-by-environment interactions. Wageningen Academic Publishers, Wageningen, The Mather Mands₄ ≅ → ∢ ≅ → ○ € → ○ < ○

K. Smoleňová, G. Buck-Sorlin

Solving ODEs in the model

- Growth (time course of growth process) described by growth functions
- Growth simulated with differential equations
- ▶ In the model, ODEs solved using a rate assignment operator of XL

```
const double k = 0.3; double W;
```

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶

- Example: exponential growth function
- $W = W_0 e^{kt}$ $rac{dW}{dt} = kW$
- W dry mass k - growth rate t - time

```
protected void init()
{ W = 1; }
```

```
public void getRate()
{ W :' = k * W; }
```

```
public void run()
{ integrate(1); }
```

K. Smoleňová, G. Buck-Sorlin

Model run (simplified)

- Set initial structure
 - Population, Individual, Meristem (associated with several hormones)
- At each derivation step:
 - Compute ODEs (inside the function getRate())
 - Source:
 - Run radiation model (can be run before computation of ODEs) Compute light interception per organ (can be run before) Compute photosynthesis per organ
 - >Sink:
 - Compute partitioning between shoot and root
 - Compute potential, actual growth rate for each organ
 - Update size of organs
 - Grow the structure (produced by Meristem)

Simulation of growth at different N fertilisation scenarios

K. Smoleňová, G. Buck-Sorlin

Results ○○ ○○●

Photosynthesis with/without sensitivity to nitrogen

- Comparison of photosynthesis rate models
 - Non-rectangular hyperbola (Thornley et al. 1990 / Thornley et al. 1989)
 - Photosynthesis-stomatal conductance model LEAFC3 / LEAFC3-N (Nikolov et al. 1995 / Müller et al. 2008)

K. Smoleňová, G. Buck-Sorlin

Conclusions and future work

- Implementation of concepts to model effects of C and N
 - Within-shoot C and N partitioning (e.g., N remobilization) needs to be improved
- Model evaluation and further parameterisation needed
- Coupling of partitioning and hormonal regulatory network sub-models
 - Internode elongation
 - Tiller formation

Introduction
0000
